

LEARNING OBJECTIVES

5-28-20

DESIRED OUTCOMES: At the end of the activity, attendees will be able to:

- describe the frequency and pathophysiologic bases of strokes related to COVID-19
- delineate the diagnostic work-up appropriate to perform in patients with stroke possibly related to COVID-19.
- incorporate into practice current therapeutic approaches to the management of COVID-19 related stroke.
- prepare to assess cultural diversity issues in risk, incidence, prevalence, disease burden, or mortality associated with COVID-19-related strokes and/or cultural disparities in access, diagnosis at more advanced stages, or less adherence to treatment regimens.
