

LEARNING OBJECTIVES

6-23-20

DESIRED OUTCOMES: At the end of the activity, attendees will be able to:

- list the current vaccine candidates for coronavirus.
- recognize that vaccines for older individuals may require more than just standard immune adjuvants.
- describe how cancers express non-mutated antigens that can be targeted by the immune system.
- describe how combination immunotherapy with cancer vaccines is effective in preclinical models.
- recognize that schedule of combination immunotherapy may affect efficacy.
- discuss that clinical trials translating these findings are starting.
- discuss the barriers and opportunities in vaccine trials for coronavirus and cancer.
- prepare to assess cultural diversity issues in developing vaccines for coronavirus and cancer.
