

LEARNING OBJECTIVES

2-11-21

DESIRED OUTCOMES: At the end of the activity, attendees will be able to:

- cite current epidemiology and incidence of nonvalvular atrial fibrillation.
- conduct a thorough history and work-up for the patient with atrial fibrillation.
- evaluate current therapies for the prevention and management of nonvalvular atrial fibrillation.
- prepare to assess cultural diversity issues in risk, incidence, prevalence, disease burden, or mortality associated with nonvalvular atrial fibrillation and/or cultural disparities in access, diagnosis at more advanced stages, or less adherence to treatment regimens.

LEARNERS: cardiac surgeons, cardiologists, emergency medicine specialists, neurologists, internists, general/family practitioners

DESIRABLE PHYSICIAN ATTRIBUTE: provide patient-centered care, apply evidence-based practice
