

LEARNING OBJECTIVES

11-2-21

PERFORMANCE GAP/ ACTIVITY NEED: Over the past several years, new studies have been published that shed light on the effectiveness of different methods of suicide risk assessment and prevention strategies. Physicians can utilize evidence-based risk assessment and prevention strategies to decrease outcomes related to suicide in their patient population. [J. Pierre, personal communication, 11/1/21].

DESIRED OUTCOMES: At the end of the activity, attendees will be able to:

- describe current rates of suicide in the US including among different ethnic groups.
- enumerate risk factors associated with suicide.
- implement evidence-based strategies to assess suicide risk.
- discuss evidence-based strategies to reduce suicide risk

LEARNERS: all clinicians

DESIRABLE PHYSICIAN ATTRIBUTES: provide patient-centered care; apply evidence-based practice
