

LEARNING OBJECTIVES

11-7-23

Performance Gap/Need: The epidemiology of respiratory viruses in California is constantly changing. Physicians need up-to-date information on which viruses are circulating and their infectivity, pathogenicity and virulence. Physicians will be better prepared to discuss respiratory virus risk and needs for vaccination with their patients.

Desired Outcomes: At the completion of this activity, participants will be able to

- describe updated respiratory virus vaccines available for the 2023-24 season.
- articulate the current climate of respiratory health in the United States.
- evaluate who should have priority for the constrained supply of RSV monoclonal antibody.

Desirable Physician Attributes: Provide patient-centered care, employ evidence-based practice.

CLC/IB Identified: Reflect on the populations most affected and consider how implicit bias may impact appropriate care of these patients.

Target Audience: All clinicians.
